

Cyrel®FAST plates in one hour or less!

The Cyrel®FAST system is a revolutionary technology that offers enhanced pressroom productivity.

Cyrel®FAST uses a dry thermal technology for plate development, completely eliminating conventional solvents and aqueous washout solutions. In addition to the obvious environmental and health gain, it also reduces the plate processing times by up to 300%.

The latest version of the Cyrel®FAST system is ideal for trade shops that tend to require a high volume of plates in varying sizes. This new system retains all of the benefits of the smaller Cyrel®FAST 1000TD, producing a high quality finished plate in less than one hour, while being environmentally sensitive. The thermal technology eliminates the need for solvents and waste polymer is collected on a non-woven fabric, making disposal simple and safe.

DuPont™ Cyrel® digital & DuPont™ Cyrel® FAST

DuPont Packaging Graphics “Advancing Flexography”

The world is going digital and DuPont wants to make sure that you can take advantage of the benefits of digital platemaking.

Digital and Thermal – The ideal workflow – But when is the right time to “take the plunge”?
There are at least six compelling reasons that say the time is NOW!

Digital flexography has been widely accepted in our industry.

Since their introduction by DuPont 1995, digital plates have leveled the playing field and allowed flexographers to compete head to head with offset and gravure. The volume of DuPont™ Cyrel® digital plates in use is doubling every year, and flexographers of all segments are benefiting from the productive, economic and quality advantages of a fully digital workflow.

DuPont™ Cyrel®FAST opens the door to rapid access platemaking.

The introduction of the thermally processed Cyrel®FAST product line cut plate access times to well under an hour while eliminating solvents or processing chemistries from platemaking.

A broad offering of computer-to-plate (CTP) devices is available.

Digital workflow is now well established and the wide range of CTP engines in a variety of sizes, configurations and prices ensures that your needs can be met.

Access to equipment financing at low cost.

DuPont offers equipment loan and upcharge programs to eligible customers. At DuPont we know that your dedication to the advancement of flexography requires more than just words – it requires commitment and investment – and we’re here to help.

Position your company for growth.

The world is going digital. We see this in our personal and professional lives everyday. Be sure that your company is ready to offer all the services and capacities necessary for growth in the global packaging industry.

DuPont™ Cyrel® helps you to make a better impression.

DuPont has been a technology leader and driving force in the growth of flexography for over 30 years.

Cyrel® product innovations and technical support have consistently raised the bar in flexo to the point where we confidently say:

“The future of packaging is flexo and the future of flexo is digital.”
